CUTTING ENERGY COSTS FROM SHETLAND TO FALKLAND

The World's most southerly powerPerfector has recently been installed in the Falklands.

The Falkland Islands Company is the largest retailer in the Islands. The installation of a powerPerfector unit at its Homecare store in Stanley is expected to save £6,490 a year and the client will achieve payback in around 30 months.

Voltage Power Optimisation (VPO) achieves the highest savings and the quickest returns in countries where, like the UK, the incoming voltage is an average of 242V or above.

VPO[®] is used extensively in the UK within 4,500 commercial buildings including 28 different government organisations and 16 supermarket chains and the technology is growing in popularity in Australia and South East Asia.

Michael Robertson-Lambert, Director of Engineering at powerPerfector, said: "The fact that the technology is used in climates as varied as Alice Springs and the Falkland Islands is testament to its robust construction.

"When you consider the excellent savings and associated carbon emissions reduction, the scale of the opportunity for VPO[®] on a global basis is very exciting."

Notes to Editors:

1. powerPerfector is the UK's leading provider of Voltage Optimisation technology to the public and private sector. Its technology helps reduce electricity bills (by an average of 6-12 per cent), cut CO2 emissions and improve power quality to protect the electrical infrastructure and help equipment work more efficiently, for longer, by regulating and controlling a building's incoming electrical energy supply.
2. Energy savings are guaranteed and verified using the International Performance Measurement and Verification Protocol (IPMVP)
3. powerPerfector is installed in over 4,500 sites in the UK and customers include Tesco, Hilton, Network Rail and the NHS. The company has contributed to a significant reduction in their carbon footprints and saved them many millions of pounds.
4. powerPerfector based in London, employing 60 people. The company was founded in 2005 and is privately owned.
