POWERPERFECTOR GAINS SGBC APPROVAL

The powerPerfector Plus is the first voltage optimisation technology to be named a certified technology by the Singapore Green Building Council (SGBC).

SGBC's Certification scheme is one of the only comprehensive listings of robustly assessed and certified green products - meaningfully differentiating safer, more efficient and more sustainable products in the building industry.

Most suitable for electrical supplies with high voltage volatility, the powerPerfector Plus adapts automatically to changing voltage conditions to give an optimised output in a fixed band, making it ideal for sites with critical equipment, or those which suffer from an unstable supply.

powerPerfector CEO Jamie Buchanan said: "This is mark of recognition for the technology not only in Singapore, where businesses are incentivised to use SGBC approved products, but across South East Asia and here in the UK.

"The criteria includes conformance with standards for carbon footprinting, restriction of hazardous substances during manufacture, environmental Quality Management and verified energy and carbon reduction.

"We are excited by the opportunity that exists for powerPerfector in South East Asia and see this approval as an important step in growing our business in the region."

Notes to Editors:

1. powerPerfector is the UK's leading provider of Voltage Optimisation technology to the public and private sector. Its technology helps reduce electricity bills (by an average of 6-12 per cent), cut CO2 emissions and improve power quality to protect the electrical infrastructure and help equipment work more efficiently, for longer, by regulating and controlling a building's incoming electrical energy supply.
2. Energy savings are guaranteed and verified using the International Performance Measurement and Verification Protocol (IPMVP)
3. powerPerfector is installed in over 4,500 sites in the UK and customers include ASDA Wal-Mart, Tesco, Hilton, Network Rail and the NHS. The company has contributed to a significant reduction in their carbon footprints and saved them many millions of pounds.
4. powerPerfector based in London, employing 80 people. The company was founded in 2004 and is privately owned.
