

Salix funding removes financial burden in Bromley

Why it is interesting: As austerity measures within the public sector continue to be tightened, the demand for energy efficiency funding from Salix is more competitive than ever.

The London Borough of Bromley

Annual Savings

kWh:	343,170
CO ₂ kg:	178,100
£:	39,300
Av. saving %:	10.4

Don't take our word for it...

"As the Account Manager for Bromley Council, I was pleased to hear from them on the anniversary of the powerPerfector units having reached their payback period and the client remains very happy with the technology and our post-sales support.

The recession and subsequent spending review within the public sector has made prioritisation of resource a hot topic with local authorities across the country.

With capital projects difficult to justify, many public sector organisations turn to financing to put in place the projects that will lead to greater efficiency and improved cost and carbon performance.

When the London Borough of Bromley approached us to help improve the environmental performance of the Civic Centre, they asked that we examine the various funding streams available within the public sector.

Salix Finance is an independent, not for profit company, funded by the Department for Energy and Climate Change, The Welsh Assembly Government and The Scottish Government via The Carbon Trust. Its purpose is to accelerate investment by public sector bodies in energy efficiency technologies through invest to save schemes.

How Salix funding works?

SALIX

In recent years powerPerfector has helped numerous public sector bodies with their Salix application process and secured millions in funding for Voltage Power Optimisation projects.

More recently, we have launched our own financing option, whereby a client pays for a unit in monthly or quarterly instalments. Invariably the payments are smaller than the savings achieved meaning that clients will be cash positive, even whilst the unit is being paid off.
